

Woodwright

WOODWRIGHT CAPABILITIES

Woodwright's laser and etching techniques are 100% customizable to meet the needs of your project.

Several of the unique projects our company has been privileged to work on contain elements that reflect the perfect blend of today's innovative technology with the trends and traditions of the past. Modern equipment certainly makes the process faster, however, in the end it is still a partnership between the creative vision of the design team, the artistry of skilled craftsman and the wood itself.

LASER CUTTING TECHNIQUE

CREATE

- Select any specie and design to create a truly unique design!
- Virtually unlimited design possibilities.
- Can be used on floors, wall planks, even stair treads or tiered seating applications.

LASER-CUT MEDALLIONS, BORDERS, AND INLAYS

- For designs that incorporate multiple species and grain directions.
- Woodwright's traditional laser cut medallions, borders, or inlays are produced by cutting through approx. 1/4" thick solid wood and assembling the intricate pieces onto a backer to be installed flush with the surround flooring.

ETCHING

- Etching is the perfect option for wall applications as durability and resandability is not a concern. Any design, logo, or even mission statement can be laser-etched into wood planks.
